

NETWORK OPTIMIZATION

Customer Objective

Support a national LTL carrier with a scalable waste management program capable of adapting to disposal market constraints while improving operational efficiency, compliance and service reliability.

The Challenge

The customer was experiencing significant waste accumulation across terminal locations throughout the Northeast resulting in operational constraints and regulatory compliance concerns. Disposal market limitations and the inability of the incumbent provider to adapt further complicated the situations, creating a backlog of nearly 1,300 hazardous and non-hazardous waste containers.

Sustain Solution

Sustain implemented a flexible and transparent waste management program focused on:

- ✓ Multi-outlet TSDF utilization
- ✓ Transportation optimization
- ✓ Market-adaptive disposal strategies
- ✓ Standardized pricing and invoicing
- ✓ Internal and partner transportation resources
- ✓ Consistent communication and program oversight.

By leveraging a diverse network of disposal facilities and transportation partners, Sustain maintained service continuity despite challenging market conditions while restoring operational capacity throughout the region.

One Partner. Multiple Disposal Outlets. Complete Program Visibility
