

STRATEGIC OPTIMIZATION

Customer Objective

Improve visibility into waste streams, reduce landfill disposal and identify environmental optimization opportunities across a national logistics network.

The Challenge

Large transportation networks generate diverse waste streams. Traditional waste programs focus on disposal, creating limited visibility into landfill avoidance, cost efficiency and material recovery opportunities.

Sustain Solution

Sustain evaluated every waste stream to identify opportunities for:

- ✓ Reuse & Recovery
- ✓ Container Optimization
- ✓ Transportation Risk Reduction
- ✓ Material Consolidation
- ✓ Stabilization & Treatment Planning

LBS REUSE
POTENTIAL

The greatest value is often created before waste leaves the facility.

Instead of asking "How do we dispose of this?" we asked, "What is the best outcome for this material?"
